Since all mats are the same price per square foot, it's easy to quote a SunTouch® system. Write down your calculations here. →

1. Calculate the total wall-to-wall area of the room, then subtract the built-ins such as the vanity, tub, toilet, refrigerator, etc.
2. Multiply this area by 0.90, then round to the nearest 5 sq.ft. This is the "heated area." For rooms with no built-ins or obstructions, simply take out 6"-12" around the perimeter of the room to determine the heated area. Don't multiply by 0.90.
3. Multiply the heated area by your mat price per square foot.

4. Add the price of a FloorStat, LoudMouth, and Installation Kit. If this price meets your budget, select mat(s) from this catalog that equal the "heated area."

**UnderFloor Mats:** The best, most accurate way to quote UnderFloor mats is to simply measure the lineal footage available in the joist space(s).

**Need a drawing?** Please reference our Design Library at [www.suntouch.net](http://www.suntouch.net) or use your WireWorks® software to select from several hundred existing drawings to find the one most similar to your project.

### Determining the amount of SunTouch Mat:

1. (Total area – built-ins) = ( \_\_\_\_\_ – \_\_\_\_\_ ) = \_\_\_\_\_ sq.ft.

2. Multiply this area by 0.90. \_\_\_\_\_ × 0.90 = \_\_\_\_\_ sq.ft.  
 Then round to nearest 5 sq.ft. "Heated area" = \_\_\_\_\_ sq.ft.

3. Multiply this area by retail mat price per square foot:  
 \_\_\_\_\_ sq.ft. × \$ \_\_\_\_\_ /sq.ft. = \$ \_\_\_\_\_

### 4. Choose any additional accessories:

	Qty.	Price Ea.	Subtotal
SunTouch (Programmable) FloorStat	_____	× \$ _____	= \$ _____
SunTouch LoudMouth	_____	× \$ _____	= \$ _____
SunTouch Installation Kit	_____	× \$ _____	= \$ _____
Extra FloorStat Sensor	_____	× \$ _____	= \$ _____
_____	_____	× \$ _____	= \$ _____
<b>TOTAL:</b>			<b>\$ _____</b>
